Mobile TELEMEDICAL POINT

Security and protection.

These days, it is very important to provide examination to patients in an isolated space, in front of a medical facility and in accordance with all standards of remote service. Our container reduces the risk of quarantine of staff and facility and thus strengthens the security of the medical system.

The Center's task is to support medical facilities in accessing their services, medical staff, e-visits, e-prescriptions, e-referrals and medical consultations. Our points have been equipped with technical solutions related to medical supervision of patients in remote places, which allows them for full mobility.

Thanks to our point, together with telemedicine and associated security systems, we can launch a Mobile Medical Center dealing with 24-hour diagnostics and medical care.

BEESMED medical points are ready for use immediately after delivery. Standard equipment has an automatic disinfection function (ozonators, UV-C lamps). Each point is equipped with a Stethomie remote stethoscope. www.stethome.com Our system supports deaf people thanks to cooperation with Migam.pl www.migam.org

It is possible to equip the point with additional medical equipment such as:

Pulse oximeter test

Checking the level of oxygenation of the body and pulse

NIBP

non-invasive blood pressure measurement

Body Weight Measurement

Body Temperature Measurement

With a non-contact thermometer.

ECG

Correctness of the electrical work of the heart.

Video connection system

BEESMED mobile telemedicine points enable quick medical supply directly on site in case of emergency. They offer equipment in accordance with the provisions on workplaces, §38 (2) „Requirements for sanitary rooms”

Offer:
